PLANET

THE EARTH

DAY

NIGHT

# THE SUN

- During the day we can see the Sun.
- The Sun is a star. It is round and gives us heat and light.
- It is the centre of the Solar System.

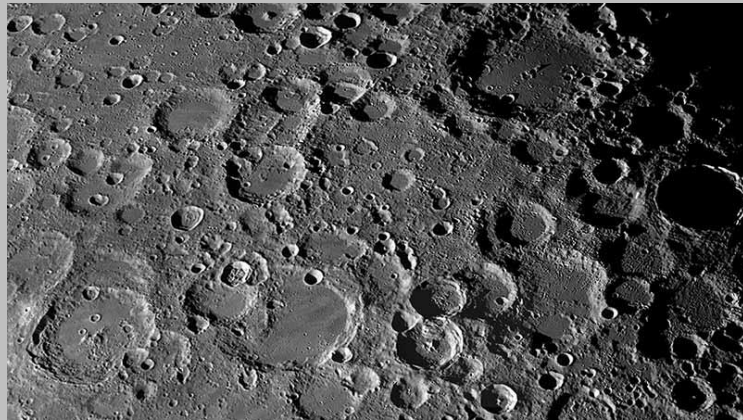

# THE MOON

- The Moon is the satellite that moves around the planet Earth.
- We can see the Moon at night with a telescope, and stars and planets too.
- The Sun lights up the Moon.
- The Moon is round but sometimes we can only see a part of it.

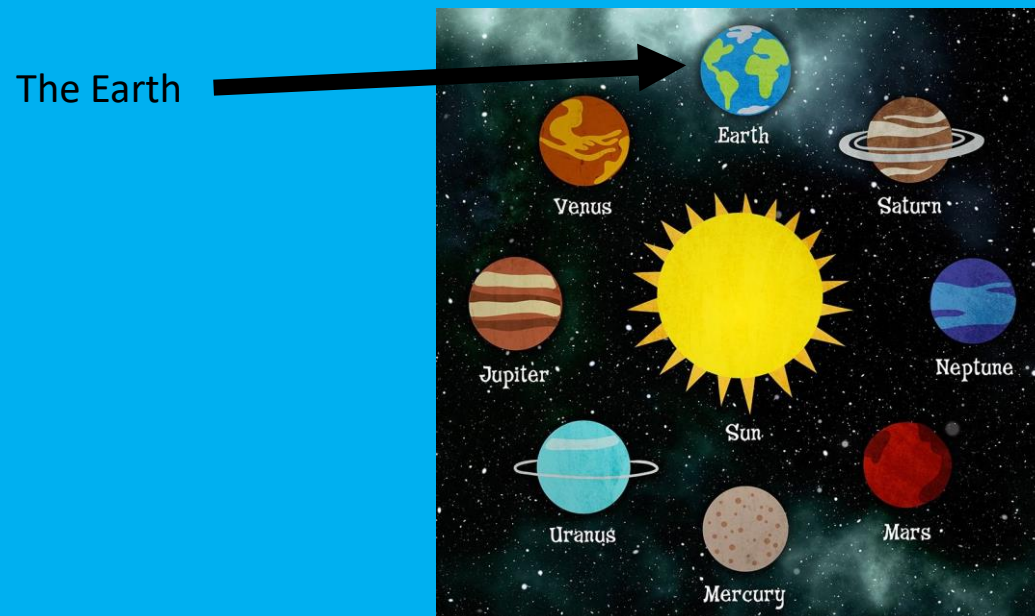

# THE MOON

- The Moon has many rocks, craters and mountains.
- There is no water or air.
- In the day, it's hot but at night, it's very cold.

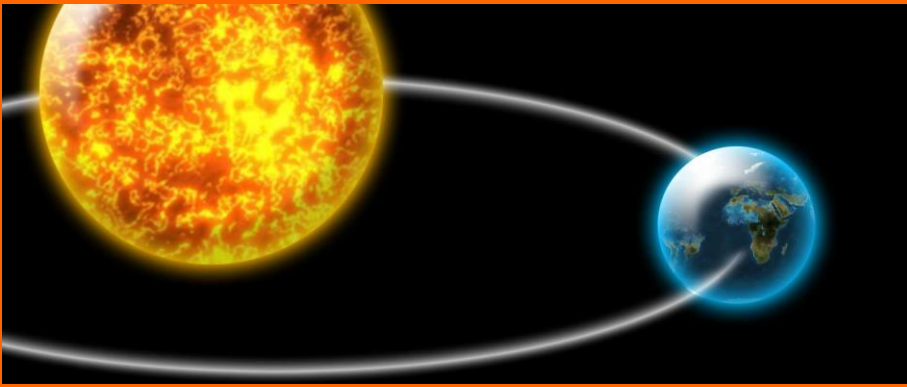

# THE EARTH AND OTHER PLANETS

- The Earth is a planet of the Solar System. It is the planet where we live.
- There are 8 planets in the Solar System: **Mercury, Venus, the Earth, Mars, Jupiter, Saturn, Uranus and Neptune.**

# THE EARTH MOVES AROUND THE SUN

- The Earth moves around the Sun, which takes one year.
- There are 12 months in a year and 4 seasons: **spring, summer, autumn and winter.**

# DAY AND NIGHT

- The Earth is always turning around the Sun.
- When one side is dark (**night**), the other side is light (**day**).
